OPTICS

Glare-proof Mirror

We produced successful production called "OPTICS" with the optical company "HOYA" to reduce the dazzling light reflection: 450-650nm (nano meter). Differing from other similar mirrors, "OPTICS" can cut the only light that human feels glaring. Riders can see more clear and sharp view due to the less brightness while the night view is the same definition.

Optics

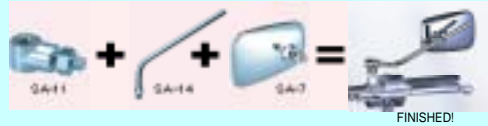

Normal Mirror

System Mirror Series

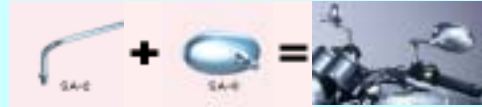

You can arrange the mirror parts matching with mirror heads, stays, stay holders as you like. In addition, you can use them for repairs.

Remarks

For those mirrors such as Baren Classic, Baren TT, Baren AA, Napoleon Motarz, the mirror housing may touch the reservoir tank. In such case, the position of mirror housing must be arranged so that it does not touch the reservoir tank by using height adjust screw or straight turner.

- *1 Make sure if the right fixing screw is of clockwise or counter clockwise.
- *2 It is likely that fixing screw of body side is 10mm clockwise and mirror side fixing damper screw is 8mm counter clockwise. In such case fix mirror to 8mm counter clockwise screw or use mirror with turner or use straight turner then mirror.
- *3 Depending on production year, 10mm clockwise screw for body side and 10mm counter clockwise screw for mirror side are implemented. Fix replacement mirror to 10mm counter clockwise screw or use mirror with turner to 10mm clockwise screw to body side or use straight turner to 10mm clockwise screw to body side.
- *4 Depending on production year, 10mm clockwise screw for body side and 10mm counter clockwise screw for mirror side are implemented. Fix replacement mirror to 10mm counter clockwise screw or use mirror with turner to 10mm clockwise screw to body side or use straight turner to 10mm clockwise screw to body side. (Mirror lock nut may not be screwed if the fixing screw to body is located deep in the cowl.)
- *5 Depending on production year, 10mm or 8mm clockwise screw and counter clockwise 8mm screw to mirror side is used. Fix replacement mirror to 8mm screw to mirror side.
- *6 Mirror lock nut can not be tightened because the fixing screw hole is covered by body cover.
